User manual
of the touch clock

A touch clock is a device that detects touch through a sandblasted pattern on the mirror and you can use it to set the 12-24h mode and the exact time. The touch clock has white backlight.

Specification

Power cinsumption:	1W
Tightness class:	IP20
Supply voltage:	12V DC
Dimensions:	112mm x 40mm

Touch clock configuration

1. After connecting the power to the mirror, the clock will light up in white.

2. If you want to change the settings of the clock, hold the switch for three seconds - the settings editor will open. Make the changes by pressing the touch screen briefly.

Touch clock configuration

3. First, set the format in which the time should be displayed. Via quick clicks to select the appropriate time format: 12 or 24 hour.

4. Then press the power switch for three seconds to enter the hour setting mode. Select the correct time with short clicks. To set the minutes, press the button again for three seconds. Use short clicks to set the minutes.
