User manual for removing the light source and separate control gear in the LED mirror with cover

1. Make sure the product has been disconnected from the light source.
2. Perform a visual inspection on the front and back of the product to determine the position of the light source and separate control gear within the product.
- 3 Use a screwdriver to separate the glued part between the mirror and the cover.
4. If, after applying the guidelines from the previous point, the mirror has not been separated from the cover, smash it using, e.g a hammer. Be careful and use protective glasses.
5. Raise the mirror pane or cover separating both surfaces from each other.
6. Disconnect the separate control gear with the wago couplings located in the center and peel them off from the pane.
7. Using a sharp tool, peel the LED strip off the mirror frame.
8. For products with a makeup mirror, cut off the LED strip wire that is in the conduit. Use a sharp tool to reveal the LED strip, then peel it off.
