User manual for removing the light source and separate control gear in the LED mirror

1. Make sure the product has been disconnected from the light source.
2. Perform a visual inspection on the front and back of the product to determine the location of the light source and separate control gear within the product.
3. Cut off the wires of separate accessories in the conduit, white cables connected to the power supply, among others, and use a sharp tool to remove it gently from the ground.
4. Using a sharp tool, gently peel the LED strip off the mirror frame.
5. For products with a makeup mirror, cut off the LED strip wire that is in the conduit. Use a sharp tool to peel off the base to expose the LED strip, then peel it off.
