## User manual for removing the light source and separate control gear in the Emily LED mirror bathroom cabinet

1. Connect the power plug to the socket and start the light source.
2. Perform a visual inspection on the front and back of the product to determine the position of the light source and separate control gear within the product.
3. Disconnect the product from the light source.
4. Place the cabinet vertically, then, using a drill-driver or screwdriver, unscrew the fixing screws on the back of the cabinet to remove the power supply. Then remove the back part.
5. Disconnect the separate control gear with the wago couplings located in the center.
6. Using a knife, cut off the control gear from the cabinet.

### Preparation of the cabinet for the panel removal

7. Place the cabinet vertically.
8. Peel off the glued mirror and the frame to which it was attached. For this purpose, you can use, for example, a thin wallpaper knife or a flat screwdriver.
9. Cut the silicone or glue on the surface between the mirror and the plate, respecting safety rules. Remove the mirror pane from the door. If, after applying the previous guidelines, the mirror has not been separated from the cabinet door, smash it using, for example, a hammer. Be especially careful and use protective glasses
10. Put the mirror pane aside in a safe place.

### Recovering the light source

11. Using a knife, cut off the light source from the wires, then detach the light source from the mounting strip and remove it gently from the inside of the cabinet door.
