Wi-Fi Weather Station configuration

1. After connecting the power supply to the mains, the station goes to configuration mode
   - The display should show "SCAN".
   - If the station displays "Error" reset the station by unplugging it three times and reconnecting it to the power!

2. To set the station you need to download free application called "WiseMirror".
(use Google Play or App Store)
3. Start the application on your device.
4. Click on the "+" sign in the upper right corner in the application

5. Then select your Wi-Fi network and enter the password for your router. Click on „Next" so the application can connect the device to the internet.

6. The station will automatically connect to the Wi-Fi network and will pair with the device
with that application.
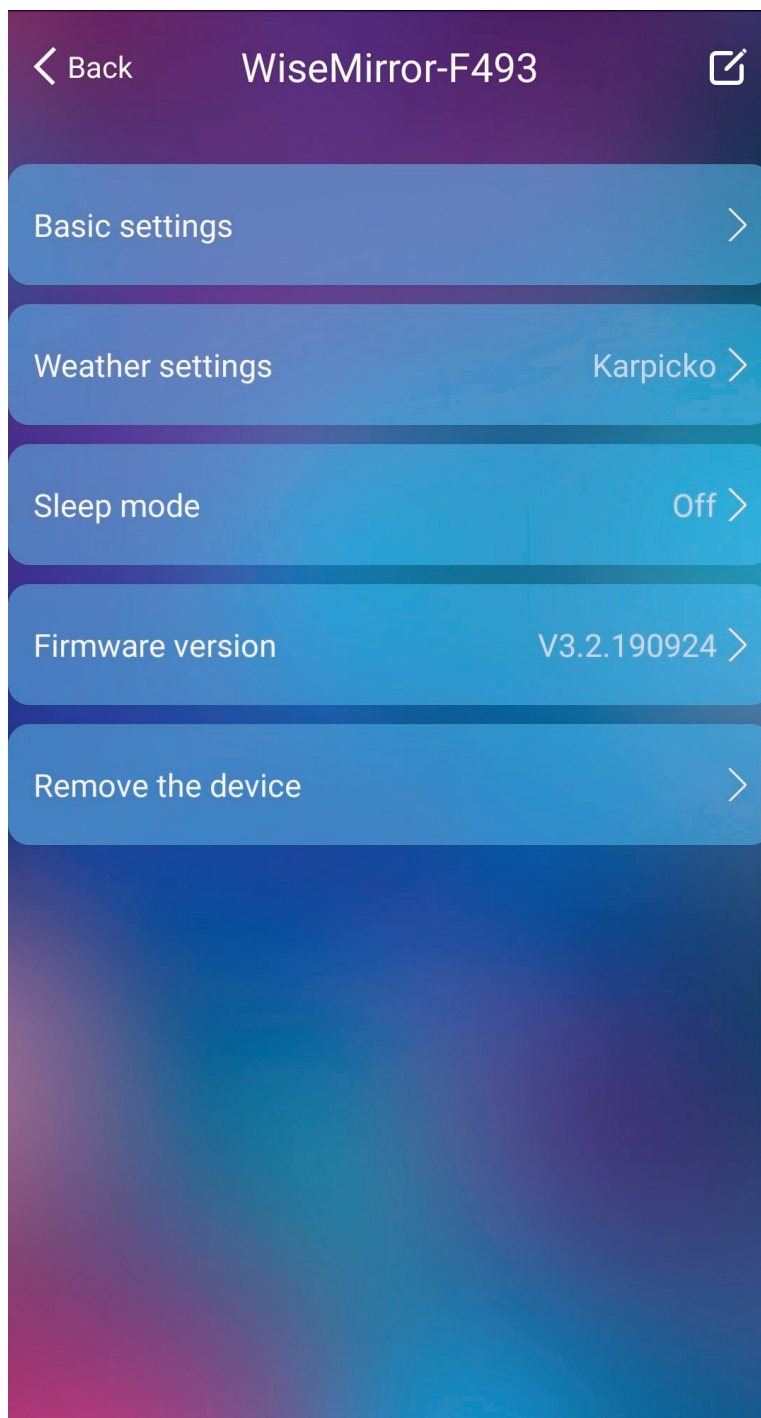

Application settings

The main interface shows devices connected to the application at the moment.

Application settings

To go to application settings select your device in the main interface.
